

Email Application Password Manager

Outlook

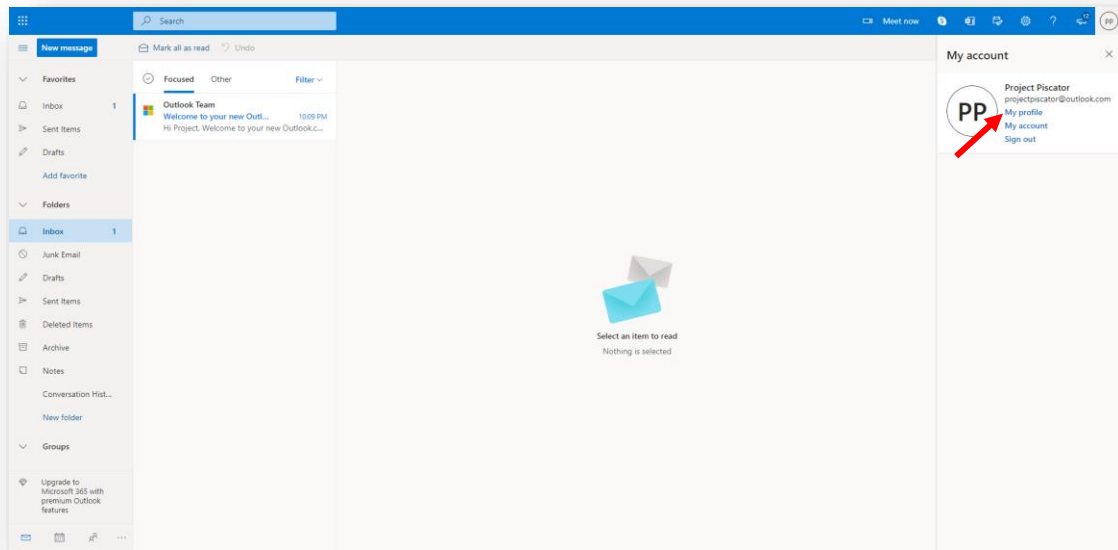

1. Go to outlook.com and login to your outlook account

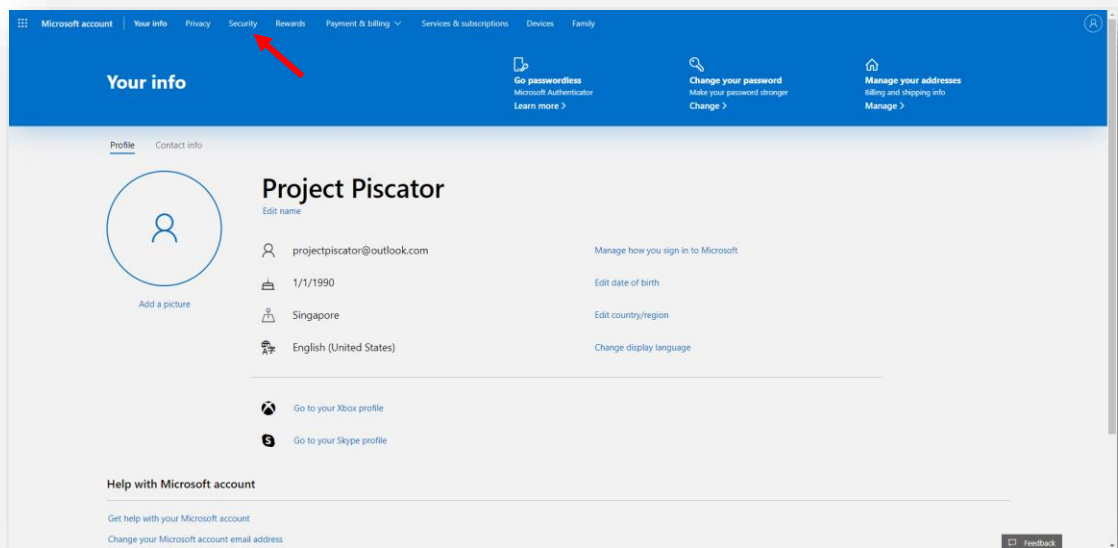

2. Once successfully logged in, select your profile on the top right corner

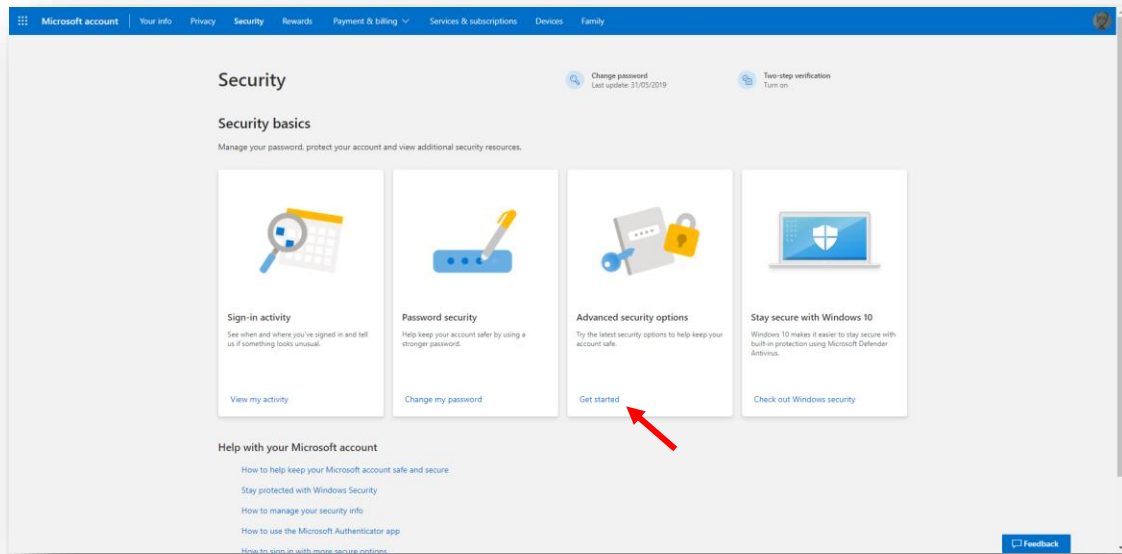

3. Select “My profile”

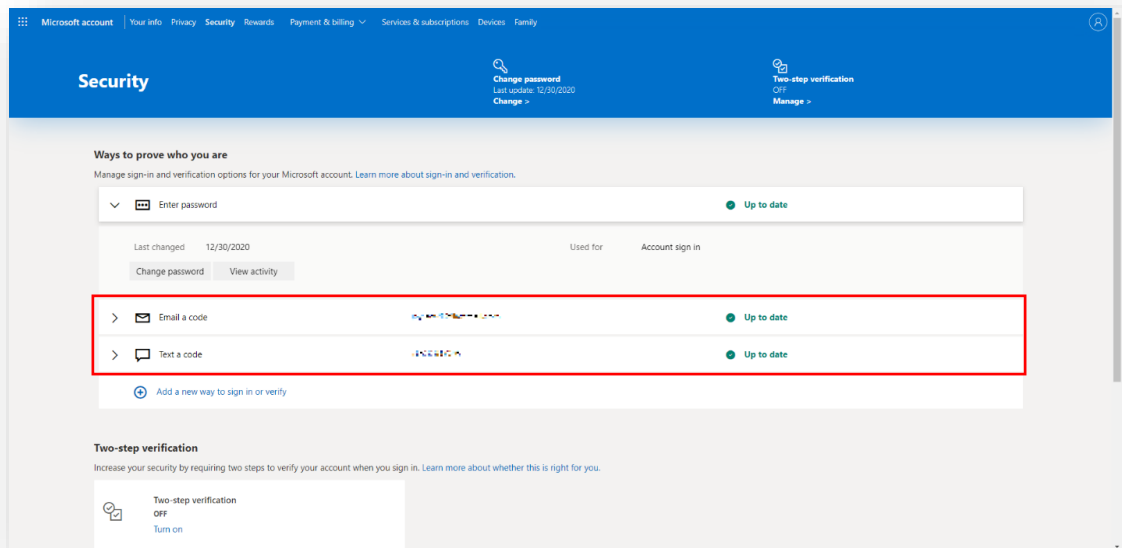

4. Select “Security”

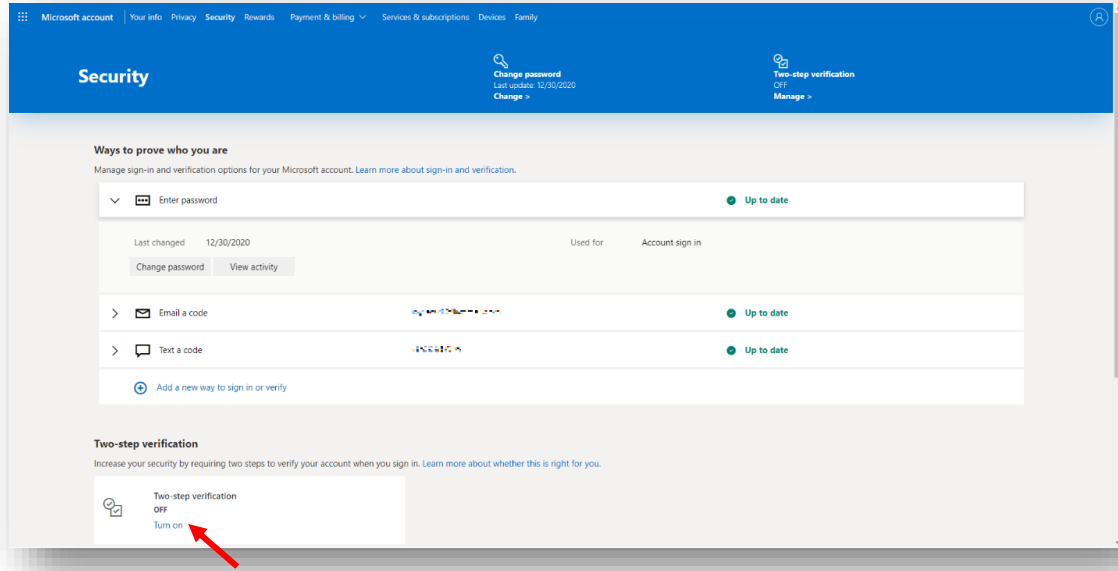

5. Under “Advanced security option”, select “Get started”

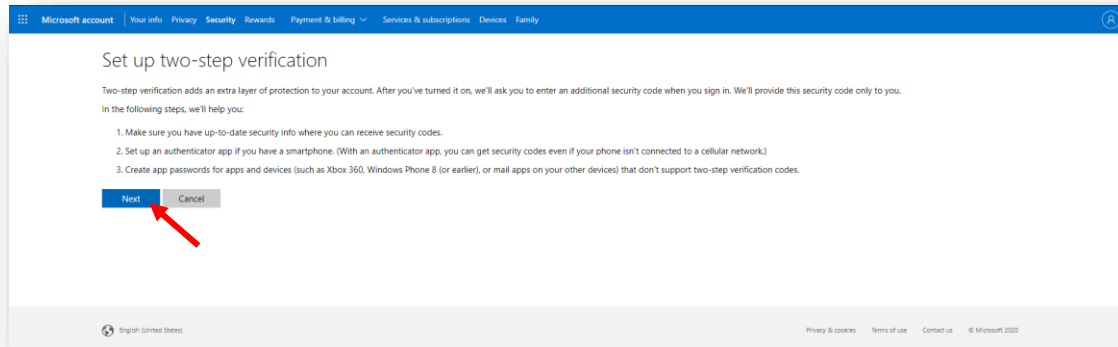

6. Under “Ways to prove who you are”, ensure that you have at least 2 options available before proceeding with the steps below

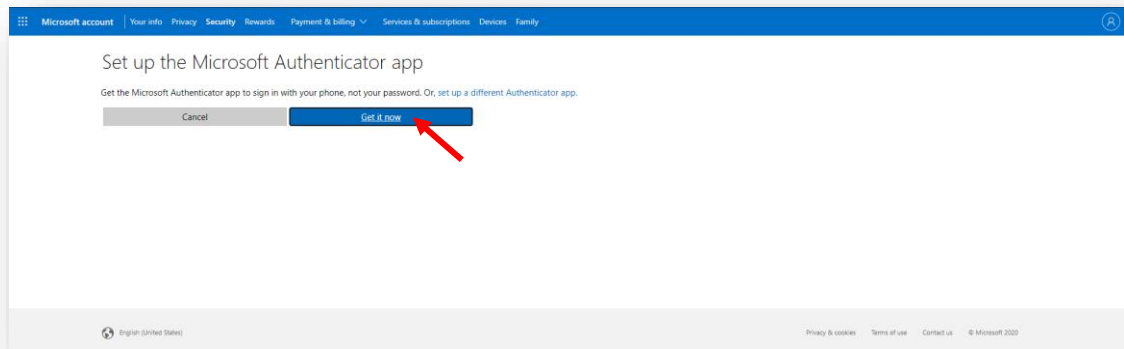

7. Under “Two-step verification”, select ‘Turn on’

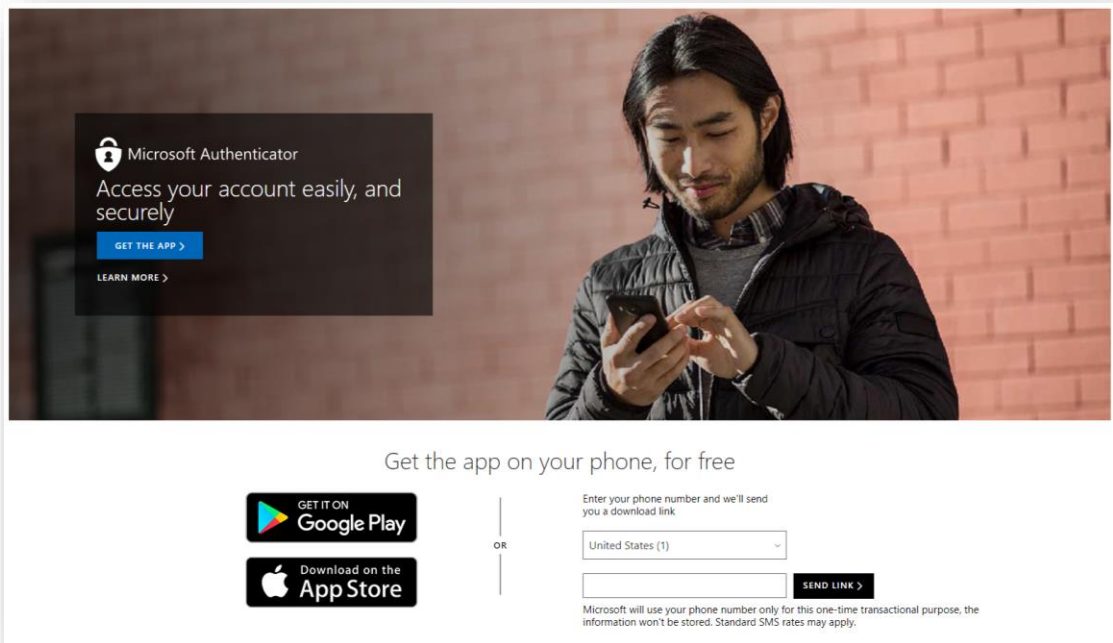

8. Select ‘Next’

9. Select 'Get it now'

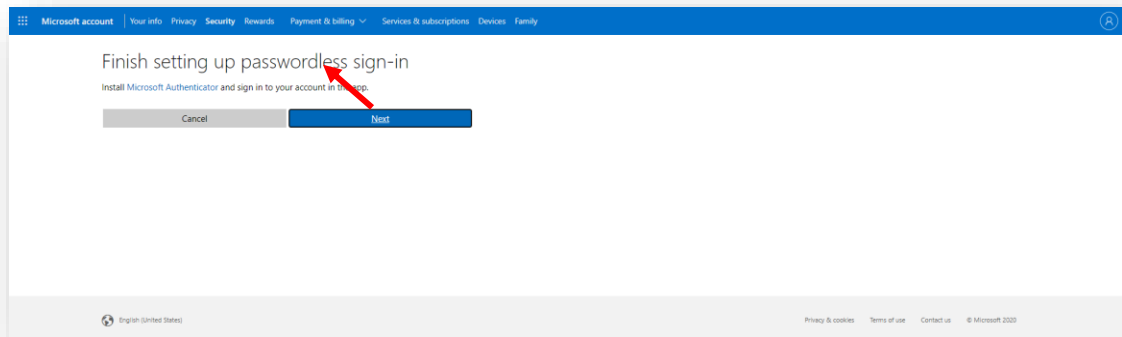

10. You will be redirected to the following website, follow the instructions to download 'Microsoft Authenticator' on a mobile device.

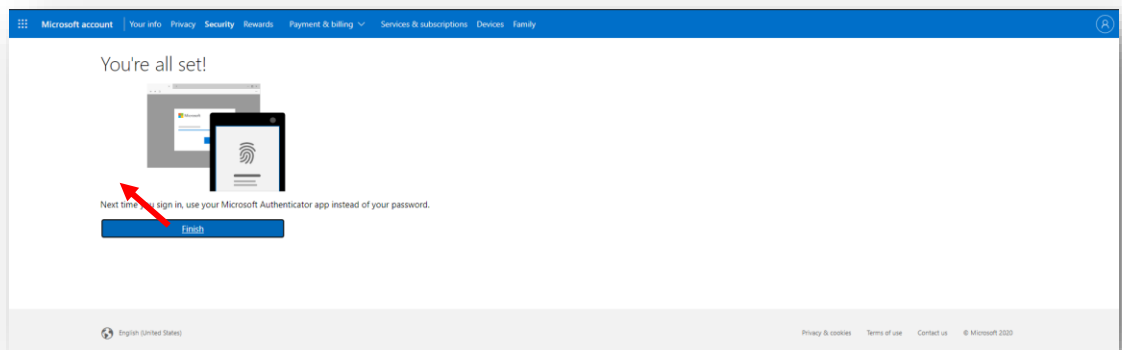

11. After downloading the mobile application, sign in with the same outlook account and verify accordingly.

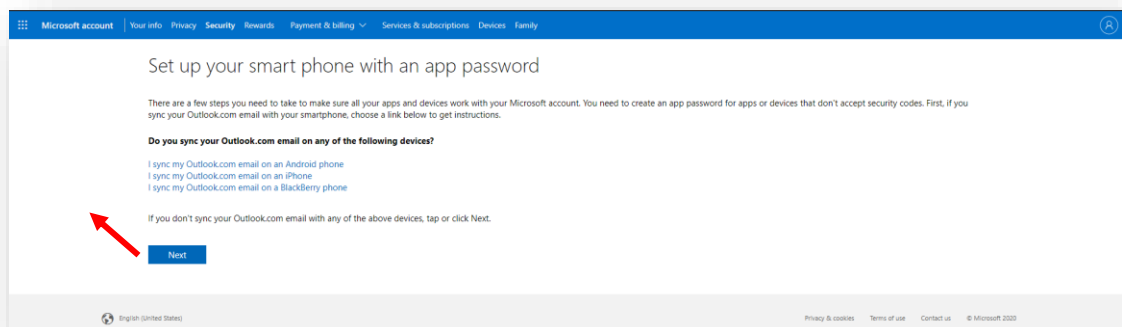

12. Once successful, return back to the web browser and select 'Next'

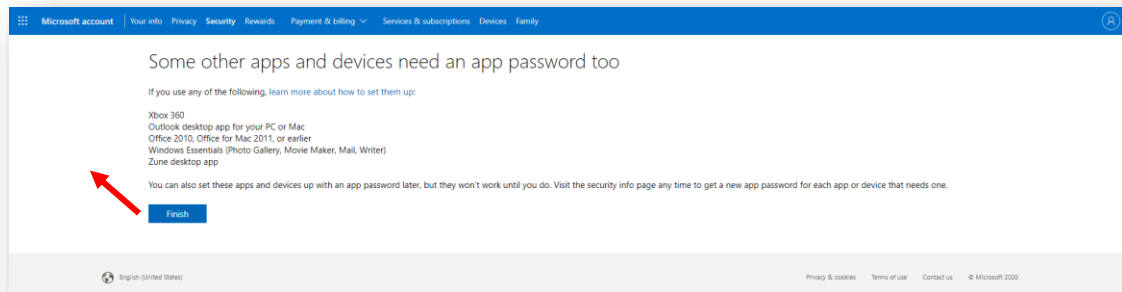

13. Select 'Finish'

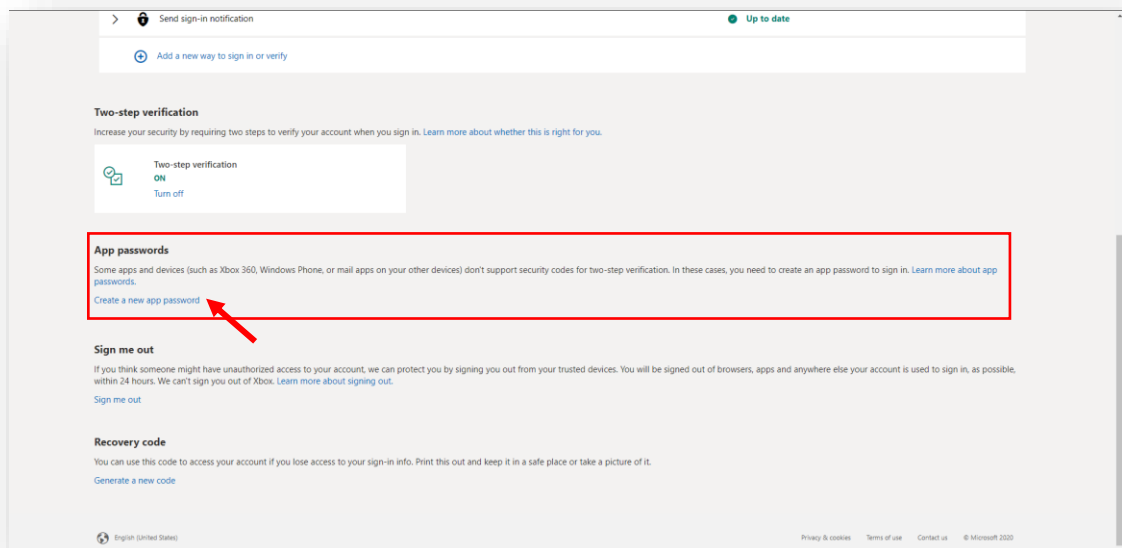

14. Select 'Next'

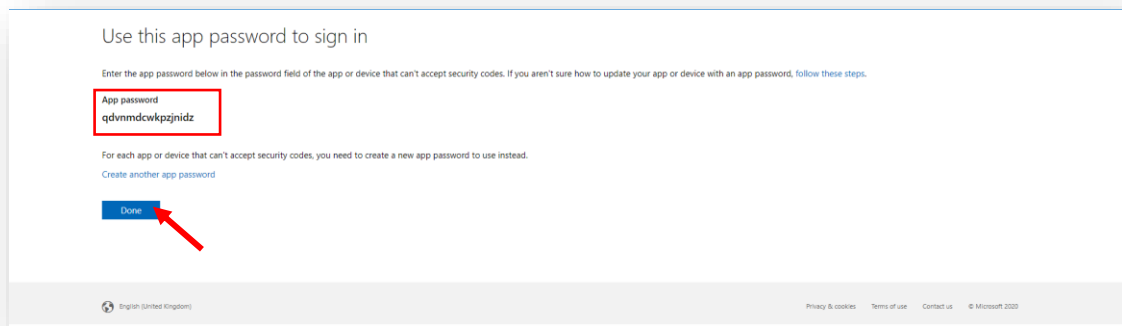

15. Select 'Finish'

16. You will be redirected back to the "Security" page. Scroll down and "App password" option should now be available. Select "Create a new app password"

17. Take note of the app password that is generated and select “Done”

Use this app password to sign in

Enter the app password below in the password field of the app or device that can't accept security codes. If you aren't sure how to update your app or device with an app password, [follow these steps](#).

App password
qdvnmcdwkpzjndz

For each app or device that can't accept security codes, you need to create a new app password to use instead.
